# Partial Differential Equations

Lawrence C. Evans

Graduate Studies
in Mathematics

Volume 19

American Mathematical Society

# CONTENTS

**Preface** . . . . . xviii

**1. Introduction** . . . . . 1
1.1. Partial differential equations . . . . . 1
1.2. Examples . . . . . 3
1.2.1. Single partial differential equations . . . . . 3
1.2.2. Systems of partial differential equations . . . . . 6
1.3. Strategies for studying PDE . . . . . 7
1.3.1. Well-posed problems, classical solutions . . . . . 7
1.3.2. Weak solutions and regularity . . . . . 8
1.3.3. Typical difficulties . . . . . 9
1.4. Overview . . . . . 9
1.5. Problems . . . . . 12

**PART I: REPRESENTATION FORMULAS FOR SOLUTIONS**

**2. Four Important Linear PDE** . . . . . 16
2.1. Transport equation . . . . . 17
2.1.1. Initial-value problem . . . . . 17
2.1.2. Nonhomogeneous problem . . . . . 18
2.2. Laplace's equation . . . . . 19

2.2.1. Fundamental solution . . . . . 20
2.2.2. Mean-value formulas . . . . . 25
2.2.3. Properties of harmonic functions . . . . . 26
2.2.4. Green's function . . . . . 33
2.2.5. Energy methods . . . . . 42
2.3. Heat equation . . . . . 44
2.3.1. Fundamental solution . . . . . 45
2.3.2. Mean-value formula . . . . . 53
2.3.3. Properties of solutions . . . . . 56
2.3.4. Energy methods . . . . . 65
2.4. Wave equation . . . . . 68
2.4.1. Solution by spherical means . . . . . 69
2.4.2. Nonhomogeneous problem . . . . . 84
2.4.3. Energy methods . . . . . 86
2.5. Problems . . . . . 89
2.6. References . . . . . 93
**3. Nonlinear First-Order PDE** . . . . . 94
3.1. Complete integrals, envelopes . . . . . 95
3.1.1. Complete integrals . . . . . 95
3.1.2. New solutions from envelopes . . . . . 97
3.2. Characteristics . . . . . 100
3.2.1. Derivation of characteristic ODE . . . . . 100
3.2.2. Examples . . . . . 103
3.2.3. Boundary conditions . . . . . 107
3.2.4. Local solution . . . . . 110
3.2.5. Applications . . . . . 115
3.3. Introduction to Hamilton-Jacobi equations . . . . . 121
3.3.1. Calculus of variations, Hamilton's ODE . . . . . 122
3.3.2. Legendre transform, Hopf–Lax formula . . . . . 127
3.3.3. Weak solutions, uniqueness . . . . . 136
3.4. Introduction to conservation laws . . . . . 143
3.4.1. Shocks, entropy condition . . . . . 144

3.4.2. Lax-Oleinik formula . . . . . 152
3.4.3. Weak solutions, uniqueness . . . . . 157
3.4.4. Riemann's problem . . . . . 162
3.4.5. Long time behavior . . . . . 165
3.5. Problems . . . . . 171
3.6. References . . . . . 173
**4. Other Ways to Represent Solutions** . . . . . 175
4.1. Separation of variables . . . . . 175
4.2. Similarity solutions . . . . . 180
4.2.1. Plane and traveling waves, solitons . . . . . 180
4.2.2. Similarity under scaling . . . . . 189
4.3. Transform methods . . . . . 191
4.3.1. Fourier transform . . . . . 191
4.3.2. Laplace transform . . . . . 200
4.4. Converting nonlinear into linear PDE . . . . . 203
4.4.1. Hopf-Cole transformation . . . . . 203
4.4.2. Potential functions . . . . . 205
4.4.3. Hodograph and Legendre transforms . . . . . 207
4.5. Asymptotics . . . . . 209
4.5.1. Singular perturbations . . . . . 209
4.5.2. Laplace's method . . . . . 214
4.5.3. Geometric optics, stationary phase . . . . . 217
4.5.4. Homogenization . . . . . 229
4.6. Power series . . . . . 232
4.6.1. Noncharacteristic surfaces . . . . . 232
4.6.2. Real analytic functions . . . . . 237
4.6.3. Cauchy-Kovalevskaya Theorem . . . . . 239
4.7. Problems . . . . . 245
4.8. References . . . . . 247

**PART II: THEORY FOR LINEAR PARTIAL DIFFERENTIAL EQUATIONS**

**5. Sobolev Spaces** . . . . . 251

5.1. Hölder spaces . . . . . 252
5.2. Sobolev spaces . . . . . 254
5.2.1. Weak derivatives . . . . . 254
5.2.2. Definition of Sobolev spaces . . . . . 257
5.2.3. Elementary properties . . . . . 259
5.3. Approximation . . . . . 262
5.3.1. Interior approximation by smooth functions . . . 262
5.3.2. Approximation by smooth functions . . . . . 264
5.3.3. Global approximation by smooth functions . . . . 265
5.4. Extensions . . . . . 267
5.5. Traces . . . . . 270
5.6. Sobolev inequalities . . . . . 275
5.6.1. Gagliardo-Nirenberg-Sobolev inequality . . . . . 275
5.6.2. Morrey's inequality . . . . . 280
5.6.3. General Sobolev inequalities . . . . . 284
5.7. Compactness . . . . . 286
5.8. Additional topics . . . . . 289
5.8.1. Poincaré's inequalities . . . . . 289
5.8.2. Difference quotients . . . . . 291
5.8.3. Differentiability a.e. . . . . 295
5.8.4. Fourier transform methods . . . . . 297
5.9. Other spaces of functions . . . . . 298
5.9.1. The space $H^{-1}$ . . . . . 298
5.9.2. Spaces involving time . . . . . 300
5.10. Problems . . . . . 305
5.11. References . . . . . 308
**6. Second-Order Elliptic Equations** . . . . . 309
6.1. Definitions . . . . . 309
6.1.1. Elliptic equations . . . . . 309
6.1.2. Weak solutions . . . . . 312
6.2. Existence of weak solutions . . . . . 314
6.2.1. Lax-Milgram Theorem . . . . . 314

6.2.2. Energy estimates . . . . . 316
6.2.3. Fredholm alternative . . . . . 319
6.3. Regularity . . . . . 325
6.3.1. Interior regularity . . . . . 326
6.3.2. Boundary regularity . . . . . 334
6.4. Maximum principles . . . . . 344
6.4.1. Weak maximum principle . . . . . 345
6.4.2. Strong maximum principle . . . . . 348
6.4.3. Harnack's inequality . . . . . 352
6.5. Eigenvalues and eigenfunctions . . . . . 353
6.5.1. Eigenvalues of symmetric elliptic operators . . . . 353
6.5.2. Eigenvalues of nonsymmetric elliptic operators . 359
6.6. Problems . . . . . 364
6.7. References . . . . . 367
**7. Linear Evolution Equations** . . . . . 368
7.1. Second-order parabolic equations . . . . . 368
7.1.1. Definitions . . . . . 369
7.1.2. Existence of weak solutions . . . . . 372
7.1.3. Regularity . . . . . 377
7.1.4. Maximum principles . . . . . 387
7.2. Second-order hyperbolic equations . . . . . 398
7.2.1. Definitions . . . . . 398
7.2.2. Existence of weak solutions . . . . . 401
7.2.3. Regularity . . . . . 409
7.2.4. Propagation of disturbances . . . . . 415
7.2.5. Equations in two variables . . . . . 419
7.3. Systems of first-order hyperbolic equations . . . . . 422
7.3.1. Definitions . . . . . 423
7.3.2. Symmetric hyperbolic systems . . . . . 424
7.3.3. Systems with constant coefficients . . . . . 431
7.4. Semigroup theory . . . . . 436
7.4.1. Definitions, elementary properties . . . . . 436

7.4.2. Generating contraction semigroups . . . . . 442
7.4.3. Applications . . . . . 445
7.5. Problems . . . . . 449
7.6. References . . . . . 452

**PART III: THEORY FOR NONLINEAR PARTIAL DIFFERENTIAL EQUATIONS**

**8. The Calculus of Variations** . . . . . 456
8.1. Introduction . . . . . 456
8.1.1. Basic ideas . . . . . 456
8.1.2. First variation, Euler-Lagrange equation . . . . . 457
8.1.3. Second variation . . . . . 461
8.1.4. Systems . . . . . 463
8.2. Existence of minimizers . . . . . 468
8.2.1. Coercivity, lower semicontinuity . . . . . 469
8.2.2. Convexity . . . . . 471
8.2.3. Weak solutions of Euler-Lagrange equation . . . 476
8.2.4. Systems . . . . . 479
8.3. Regularity . . . . . 484
8.3.1. Second derivative estimates . . . . . 485
8.3.2. Remarks on higher regularity . . . . . 488
8.4. Constraints . . . . . 490
8.4.1. Nonlinear eigenvalue problems . . . . . 490
8.4.2. Unilateral constraints, variational inequalities . 494
8.4.3. Harmonic maps . . . . . 498
8.4.4. Incompressibility . . . . . 500
8.5. Critical points . . . . . 505
8.5.1. Mountain Pass Theorem . . . . . 505
8.5.2. Application to semilinear elliptic PDE . . . . . 510
8.6. Problems . . . . . 516
8.7. References . . . . . 519
**9. Nonvariational Techniques** . . . . . 520
9.1. Monotonicity methods . . . . . 520

9.2. Fixed point methods . . . . . 528
9.2.1. Banach's Fixed Point Theorem . . . . . 528
9.2.2. Schauder's, Schaefer's Fixed Point Theorems . . 532
9.3. Method of subsolutions and supersolutions . . . . . 537
9.4. Nonexistence . . . . . 541
9.4.1. Blow-up . . . . . 541
9.4.2. Derrick-Pohozaev identity . . . . . 544
9.5. Geometric properties of solutions . . . . . 547
9.5.1. Star-shaped level sets . . . . . 547
9.5.2. Radial symmetry . . . . . 549
9.6. Gradient flows . . . . . 553
9.6.1. Convex functions on Hilbert spaces . . . . . 553
9.6.2. Subdifferentials, nonlinear semigroups . . . . . 559
9.6.3. Applications . . . . . 565
9.7. Problems . . . . . 567
9.8. References . . . . . 569
**10. Hamilton-Jacobi Equations** . . . . . 571
10.1. Introduction, viscosity solutions . . . . . 571
10.1.1. Definitions . . . . . 573
10.1.2. Consistency . . . . . 576
10.2. Uniqueness . . . . . 579
10.3. Control theory, dynamic programming . . . . . 583
10.3.1. Introduction to control theory . . . . . 583
10.3.2. Dynamic programming . . . . . 585
10.3.3. Hamilton-Jacobi-Bellman equation . . . . . 587
10.3.4. Hopf–Lax formula revisited . . . . . 594
10.4. Problems . . . . . 596
10.5. References . . . . . 598
**11. Systems of Conservation Laws** . . . . . 599
11.1. Introduction . . . . . 599
11.1.1. Integral solutions . . . . . 602
11.1.2. Traveling waves, hyperbolic systems . . . . . 605

11.2. Riemann's problem . . . . . 612
11.2.1. Simple waves . . . . . 612
11.2.2. Rarefaction waves . . . . . 615
11.2.3. Shock waves, contact discontinuities . . . . . 616
11.2.4. Local solution of Riemann's problem . . . . . 624
11.3. Systems of two conservation laws . . . . . 626
11.3.1. Riemann invariants . . . . . 627
11.3.2. Nonexistence of smooth solutions . . . . . 631
11.4. Entropy criteria . . . . . 634
11.4.1. Vanishing viscosity, traveling waves . . . . . 634
11.4.2. Entropy/entropy flux pairs . . . . . 638
11.4.3. Uniqueness for a scalar conservation law . . . . . 642
11.5. Problems . . . . . 647
11.6. References . . . . . 648

**APPENDICES**

**Appendix A: Notation** . . . . . 649
A.1. Notation for matrices . . . . . 649
A.2. Geometric notation . . . . . 650
A.3. Notation for functions . . . . . 651
A.4. Vector-valued functions . . . . . 655
A.5. Notation for estimates . . . . . 656
A.6. Some comments about notation . . . . . 657
**Appendix B: Inequalities** . . . . . 657
B.1. Convex functions . . . . . 657
B.2. Elementary inequalities . . . . . 658
**Appendix C: Calculus Facts** . . . . . 663
C.1. Boundaries . . . . . 663
C.2. Gauss-Green Theorem . . . . . 664
C.3. Polar coordinates, coarea formula . . . . . 665
C.4. Convolution and smoothing . . . . . 666
C.5. Inverse Function Theorem . . . . . 669
C.6. Implicit Function Theorem . . . . . 670

C.7. Uniform convergence . . . . . 672
**Appendix D: Linear Functional Analysis** . . . . . 673
D.1. Banach spaces . . . . . 673
D.2. Hilbert spaces . . . . . 674
D.3. Bounded linear operators . . . . . 675
D.4. Weak convergence . . . . . 677
D.5. Compact operators, Fredholm theory . . . . . 679
D.6. Symmetric operators . . . . . 683
**Appendix E: Measure Theory** . . . . . 684
E.1. Lebesgue measure . . . . . 685
E.2. Measurable functions and integration . . . . . 686
E.3. Convergence theorems for integrals . . . . . 687
E.4. Differentiation . . . . . 688
E.5. Banach space-valued functions . . . . . 688

**Bibliography** . . . . . 690

**Index** . . . . . 695
